

1. Download the new 2016 GFDL system from EMC subversion system by typing the following command:

```
svn co https://svnemc.ncep.noaa.gov/projects/gfdl/tags/gfdl_v13.0.0_snapshot_20150415
```

2. Compile the source code, but be sure to first create the exec directory:

```
cd gfdl.v14.0.0
```

```
mkdir exec
```

```
cd sorc
```

Edit "compile.sh" and change the values of "GFDLROOT" on Line 3, so that the executables are placed in the proper exec directory.

```
./compile.sh
```

3. Copy the necessary fix files

```
mkdir gfdl.v14.0.0/fix
```

```
cd gfdl.v14.0.0/fix
```

Copy all files from Luna:/gpfs/hps/emc/hwrf/noscrub/Timothy.Marchok/gfdl/fix
